## (54) CAMERA IMAGE DISPLAY EQUIPMENT AND METHOD

## (57)Abstract:

**PROBLEM TO BE SOLVED:** To provide camera image display equipment wherein position relation between a map and an image can be recognized at a first glance.

**SOLUTION:** This camera image display equipment is provided with a signal receiving device which receives a signal transmitted from a moving object on which a camera and a GPS position measuring device are installed and outputs an image signal and a GPS position signal, a map signal outputting device for outputting a two-dimensional map signal by GIS, an image control device wherein the two-dimensional map signal and the image signal are subjected to compositing on the basis of the GPS position signal, and a compositing image signal in which a camera image is overlapped with a map is outputted, and a monitor device which displays the compositing image signal outputted from the image control device as an image.
